LIOR GP - PROXIMA FUND - I/A (EUR)

March 2024

Investment Objective

• The LIOR GP – Proxima Fund (the "Fund") aims to achieve a positive return in any type of market condition by investing across fixed income and currencies on a global basis, using macroeconomic research, valuation metrics, technical indicators and quantitative tools.

• Specifically, the Fund seeks to outperform the euro short-term rate over any 3-year holding period, while offering controlled risk exposure. For indicative purposes, given the risk profile, the Fund seeks to return 0.5% per annum in excess of the euro short term rate after deduction of all operating fees and expenses, including management and performance fees.

• The Fund seeks to outperform the average ESG score of its investment universes. The main drivers of the ESG strategy consist in ESG integration in fundamental analysis, negative and exclusionary screening and analyzing and selecting issuers with an overall positive ESG tilt. The Fund generally promotes social and/or environmental characteristics but does not have as its objective sustainable investment within the meaning of the EU's Sustainable Finance Disclosure Regulation.

Manager Commentary

Performance review

For the month of March, the LIOR GP - Proxima Fund posed a net performance of 0.27%.

The Fixed Income part of the portfolio posted a positive performance of 0.79% mostly driven by the expositions to EM local bonds such as Mexican Bonos and US Treasuries.

The FX allocation recorded a negative performance of -0.35%.

Markets views

While markets have adjusted to the Federal Reserve's more hawkish stance, the Fed is still perceived as accommodative. In light of improving economic growth and employment expectations, the Fed anticipates a looser monetary policy by year-end 2024, both nominally and in real terms. During the latest March FOMC meeting, the Fed's Summary of Economic Projections (SEP) forecasted that inflation (core PCE) would decline to 2.6% by the end of 2024, unchanged from their September projection. Over the same period, the committee revised its year-end Federal Funds Rate (FFR) projection downward to 4.6% from 5.1%, implying three 25-basis-point rate cuts from current levels. Accordingly, the Fed foresees a looser monetary policy by revising its year-end 2024 real rates (FFR minus core PCE) from 2.5% (as projected in September) to 2% (as projected in March). The Fed's rationale for lowering real rates amid an expanding economic environment and improving employment outlook is to mitigate growth risks and ensure a soft landing. During the March meeting, Chair Powell indicated that recent inflation data (showing higher readings) has not altered the Fed's perspective on the broader disinflation trend. His remarks on quantitative tightening (QT) tapering have also been supportive. Currently, both the market and the Fed are closely aligned in forecasting three rate cuts, likely to occur at the June, September, and December meetings.

The first quarter has been challenging for our fund, primarily due to three main themes, listed in order of impact:

1-A short position on European financials, as European banking stocks have undergone a significant rally, marking their longest winning streak since before the 2008 global financial crisis. The Stoxx 600 Banks Index, which comprises major European banks, surged by 13% in the first quarter and has risen for six consecutive quarters, a performance last seen in 2006.

2-The depreciation of the Japanese yen and overall reduction in foreign exchange (FX) volatility, resulting in most of our options expiring worthless.

3-A lesser factor was the increase in interest rates following a stronger U.S. economic environment.

Looking forward, we anticipate a synchronized improvement in global manufacturing, driven by positive American leading indicators and ongoing advancements in China's manufacturing, export, and service sectors. If this global manufacturing recovery materializes, we anticipate a shift in the "dollar smile" phenomenon, with high-yielding currencies outperforming while the dollar lags behind. This environment would also be favourable for global equities, especially in light of the announced corporate buybacks for 2024. We view any market dips throughout the year as potential buying opportunities. However, caution is warranted in the short term due to two temporary factors affecting demand-supply dynamics: buybacks tapering during blackout periods ahead of reporting, and seasonal flatness in inflows.

Additionally, we have some concerns about the job market for the remainder of the year. Despite robust immigration numbers, the U.S. would need to create close to 200,000 jobs per month just to maintain stable unemployment levels. Advanced indicators suggest a potential deterioration in job creation in the coming months.

We appreciate your support and remain confident that our agile macro framework will enable us to perform well in the months ahead.

Footnotes and Important Information

1) High Water Mark (HWM), defined as the highest Net Asset Value per share. The performance fee represent 20% of the yield from the Net Asset Value per share compared to the HWM.

2) VaR (Value-at-Risk) is calculated using a 99% parametric confidence interval and 20 day holding period.

3) The overall ESG Score of the portfolio is calculated by taking into account the ESG scores of the various eligible assets on a weighted basis. Eligible assets are sovereign, credit bonds and cash equities.
The "ESG dynamic allocation score" is calculated using an allocation that reflects the rebased real-time allocation of the portfolio on eligible assets according to different comparable subuniverses.
The lower the ESG score, the lower the sustainability risk.

4) The sustainability risk is an Environmental, Social, Governance event or condition that, if it occurs, would cause a negative material impact on the value of an investment. Please note that the Fund’s sustainability risk may differ from the sustainability risk of its investment comparable universe.
